

Hype vs. Reality: AI/Robotics and
Impact on Employability, March 19, 2014
Ernest Davis, New York University

Research: Automated commonsense reasoning,
particularly spatial and physical reasoning.

Unlikely to have significant practical impact in
the next 25 years.

Impact of AI/Robotics on employability

Disclaimer: I have no expertise in this area, just
opinions

Jobs will be affected by computer technology due to:

- Advances in AI/Robotics/Data Science
- Advances in Comp Sci/Networks generally
- Social changes in response (e.g. nonpayment for content creation).

These should be considered together. Not much point in considering the impact of AI in isolation.

Two technologies that may adversely impact jobs:

- Self-driving cars
- MOOCs
